Application/Control Number: 10/517,118 Page 2

Art Unit: 1742

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains.

Patentability shall not be negatived by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of

the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of

the various claims was commonly owned at the time any inventions covered therein

were made absent any evidence to the contrary. Applicant is advised of the obligation

under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was

not commonly owned at the time a later invention was made in order for the examiner to

consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (q)

prior art under 35 U.S.C. 103(a).

3. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Vaidyanathan et al. in view of Bagley.

Vaidyanathan et al. discloses the invention substantially as claimed. Vaidyanathan et

al. discloses a method of forming a sintered body comprising:

providing a metal powder and a binder;

removing the binder to form a debound body; and

sintering the debound body to form a sintered body.

Art Unit: 1742

Vaidyanathan et al. further discloses wherein the binder includes carbamide (col. 4, line 17).

Vaidyanathan et al. further discloses a temperature range for removing the binder that overlaps that as claimed by Applicant, establishing a prima facie case of obviousness. Vaidyanathan et al. further discloses that powders used in sintering processes can be looked to in the invention (col. 3, lines 40-63), but is silent as to stainless steel powders. It is common knowledge to use stainless steel powders in applications where the formed product is to be used in a corrosive environment, thus it is obvious to use stainless steel powders in the invention of Viadyanathan et al. in order to form a corrosion resistant body.

However, Vaidyanathan et al. is silent as to machining the of the green body.

Bagley teaches that green bodies can be machined in the same field of endeavor (col. for the purpose of forming detail upon the final body.

It would have been obvious to one having ordinary skill in the art at the time of the invention to use green body machining as taught by Bagley in the invention of Vaidyanathan et al. in order to form final detail upon the sintered body.

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Application/Control Number: 10/517,118 Page 4

Art Unit: 1742

5. Claim 3 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite

for failing to particularly point out and distinctly claim the subject matter which applicant

regards as the invention.

Claim 3 contains language that provides for a selection of temperature ranges that

results in an unclear limitation, i.e. range within a range, that renders the claim

indefinite.

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Daniel J. Jenkins whose telephone number is 571-272-

1242. The examiner can normally be reached on M-TH6:30AM-5:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Roy King can be reached on 571-272-1242. The fax phone number for the

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
